

# ACV-16069 - Eddy Current & Optical Inspection Machine

Self-developing software  
Easy to set up, user friendly

Eddy Current Module

Inspection hardness, material mix,  
with / without heat treatment.  
For wide range of fasteners,  
components inspection.

Accuvision's self-developing Eddy Current, both software and hardware are designed by Accuvision's R&D team, and co-work with a US partner for design, and produce the inspection probes with a highly sensitive and sorting ability.

Accuvision has the capability to add the Eddy Current with optical inspection function to be a two-in-one machine for inspection hardness, material mix, parts dimension, crack and other surface defects, providing a more valuable, efficient and high cost-performance inspection machine for customers to save time and cost.

## Feature

1. Two-in-one design to enable best cost performance ratio and secure highest compatibility and efficiency
2. Easy operation via in-house design , user friendly software
3. Highly sensitive and sorting ability
4. Inspecting a wide range of components
5. Hardness:  $\pm 1^\circ$  HRC

## Inspection criteria

Eddy current : hardness, material mix,  
with/without heat treatment
